

Comprehensive, Cost-Effective Care of Closed Landfills

EIL served as environmental engineer, maintenance and compliance manager for two closed landfills for 15 years.

Our team's practical experience in permitting, groundwater, surface water and air as well as landfill gas and leachate reduced post closure care costs while maintaining regulatory compliance.

Client: Confidential
Location: Illinois
Date of Services: 1999-Present

Since 1999, EIL has been the lead environmental consultant for two closed landfills owned by this private entity in Illinois. Responsibilities include:

- Groundwater, leachate, gas and air permitting, including permitting LFGTE plants at both sites,
- Air compliance and reporting,
- Landfill gas collection system design,
- Capital and operations budgeting,
- Groundwater management, including the design and construction of groundwater remedial systems,
- Development of final land use concepts
- Regulatory negotiations,
- Technical support to wellfield O&M personnel,
- Operational troubleshooting and repair,
- Compliance audits,
- Construction management,
- Public meeting assistance, expert witness, and
- Presentations to non-technical executives of the owner's organization.

EIL's experienced closed site team combines:

- Practical, hands-on experience,
- Strong focus on Health & Safety without neglecting financial concerns,
- Extensive knowledge of landfill cover, gas and leachate systems, and
- A focus on client preferences.
